

TRM - 006A Operation Manual

Thank you for purchasing our TRM-006A. Please thoroughly read this manual for proper operation of TRM-006A. This product provides you not only a digital indication function but also a function of automatically holding the maximum measurement (peak value) and minimum measurement (bottom value) so as to confirm the measurements during operation. In addition, the measurements can be selected as event outputs for external contacts (option). Furthermore, the communication function (RS-485) can be selected as an option, allowing data management on a computer to which TRM-006A is connected.

Cautions

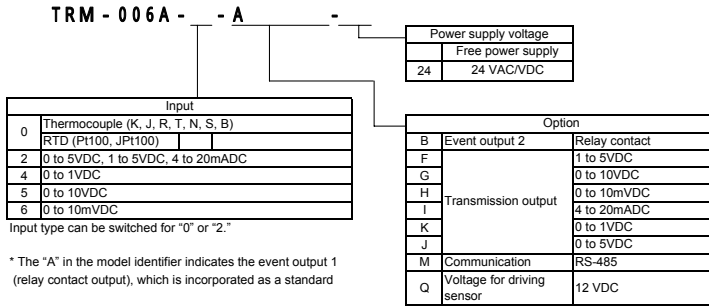

For safety purpose, following symbols are used in this manual.

	Warning	The case that a user may receive fatal damage, electric shock, or severe burn injury when the product is incorrectly used
	Caution	The case that a user may receive minor damage or the equipment may get damage
	Warning	Verify correct wiring before turning on electricity since incorrect wiring may cause an equipment failure or a fire. Modification of this equipment may cause malfunctioning or a fire. Do not add modification on this equipment.
	Caution	Wiring: Do not use empty terminals for irrelevant purposes. Operation: Do not use a sharp-pointed tool for operating keys.

- Please hand over this manual to the person using the product and have it securely stored.
- Do not reprint or duplicate this manual without permission.
- Content of this manual may be subject to modification without prior notice.
- Please acknowledge that any fault caused after use of this product may not be responsible to us.
- It takes approx. 4 sec after its power is turned on until the product is operable. This must be taken into account if the product is used in an interlock circuit.

Verification of the product

- 1) Verification of the model: Refer the model name printed in the packing box to the order sheet.
- 2) Verification of accessories: Fixing bracket and this manual
- 3) Model table:

* The "A" in the model identifier indicates the event output 1 (relay contact output), which is incorporated as a standard

Environmental condition

- (1) Service temperature/humidity range: 0 to 50°C, 20 to 90% RH (no dew condensation)
- (2) Storage temperature/humidity range: -25 to 70°C (no freezing or dew condensation), 5 to 95% RH (no dew condensation)
- (3) Equipment environment:

- 1) No corrosive gases, dust, and oil
- 2) As far away as possible from an electric noise source, and little effect from electromagnetic field
- 3) As few as possible with mechanical vibrations or impacts
- 4) No direct sunlight and water splashes
- 5) Indoor use
- 6) Altitude up to 2000m
- 7) Pollution Degree 2
- 8) Installation Category

Cautions for wiring

- * Refer to labels on the product and this manual for correct wiring. Ensure that all wire connections, such as input terminals, power terminals and optional terminals, are correct prior to power turn-on.
- * Use wire materials with wire resistance of 5Ω or less per wire for connection between a resistance thermometer and this product.
- * Use a specified conductive wire or wire element for connection between a thermocouple and this product.
- * Use shielded wires when this product is used adjacent to a noise generation source.
- * Do not wire an input line and output line together.

Drawing No. 20-0787

Front panel - names and tasks

PV	Indicates measured value and character
	Indicates measured value
AL1	Lights up when the event output 1 is turned on
AL2	Lights up when the event output 2 is turned on
COM	Blinks during communication being underway
MODE	MODE key
	Used when screens are to be switched
<<	DIGIT MOVE key
	Used when digits are to be moved at setting, available by setting the digit move function setting to ON (usable)
	UP key
	Used for increasing the set value
	DOWN key
	Used for decreasing the set values

Outside dimension

How to mount

Panel cutting diameter

Terminal arrangement

Input	TC / V		RTD		No use
	+	-	A	B	
AL1 (relay contact)	+	-	NO	NC	Communication
	-	-	NO	NC	
Power supply for driving sensor 12VDC	+	-	No use		A L 2
	-	-	+	-	
Power supply voltage is "-" and is "+" for DC power supply.	+	-	+	-	Transmission output
					Event output 1
					Event output 2
					Communication

- Warning** * Use crimping terminals fitted to M3.5.
- * Tightening torque: 0.5N-m (5kgf-m)
- * Wire with care on polarity (+ or -), if applicable.
- * For the relay contact output, "C" represents "common" and "NO" represents "normal open."

- Caution** * Do not touch terminals while power is supplied, due to danger of an electric shock.

Isolation

Power supply circuit	
PV input	Voltage of 12VDC for driving sensor
	Transmission output
CPU circuit	Event output 1
	Event output 2
Communication	

Standard specifications

Types of inputs	Thermocouple	K, J, R, T, N, S or B (External resistance within 0.5μV/1Ω)	Key switching available
	RTD	Pt100 or JPt100 (External resistance 10Ω or less per line)	
	Current/voltage	0 to 5VDC/1 to 5VDC (Input resistance of 500kΩ or more), 4 to 20mADC (Input resistance of 250Ω)	Key switching available
		0 to 1VDC (Input resistance of 500kΩ or more), 0 to 10mVDC/0 to 10VDC (Input resistance of 1MΩ or more)	
Indication	Indication of set value/character	4 figures, green, 14mm	
	Setting indication	4 figures, red, 8mm	
	Function indication	Red LED (AL1 and AL2), green LED (COM)	
Sampling interval	250mS		
Display precision	Thermocouple	Either ± (0.3% + 1digit) or ± 2°C of the reference value, whichever larger (ambient temperature of 23 ± 10°C) Note: ± 3°C for - 100 to 0°C, ± 4°C for - 200 to - 100°C, and no specification for 400°C or lower with thermocouple B	
	RTD	Either ± (0.3% + 1 digit) or ± 0.9°C of the reference value, whichever larger (ambient temperature of 23 ± 10°C)	
	Current/voltage	Full span ± (0.3% + 1digit) (ambient temperature of 23 ± 10°C), where full span = setting range	
Memory element	EEPROM		
Power supply voltage	100 to 240VAC, 50/60Hz, and 24VAC/VDC ± 10%, 50/60Hz		
Weight	300g or less		
Power consumption	10VA (240VAC), 6VA (24VAC), and 4W (24VDC)		
Instant power-off	No effect on operation by power-off within 1 cycle		
Insulation resistance	Between measurement terminal and casing: 20MΩ at 500VDC, and between power supply terminal and casing: 20MΩ at 500VDC		
Withstand voltage	Between measurement terminal and casing: 1 min at 1000VAC, and between power supply terminal and casing: 1 min at 1500VAC		
Burnout (cut wire)	Thermocouple/resistance thermometer		Overscale
	0 to 5 /0 to 1 /0 to 10VDC		Equivalent to 0 input
	1 to 5 VDC/4 to 20mADC		Underscale
	0 to 10 mVDC		Overscale
Priority screen	Available with indication of arbitrary parameter screens in the operation mode (9 pcs)		
Lock function	4-mode selection (lock OFF, ALL, lock of the operation mode and lock other than the operation mode)		

Indication ranges

		Indication range		Setting range	
		Without decimal point	With decimal point	Without decimal point	With decimal point
Thermocouple	K	- 210 to 1382	- 199.9 to 999.9		
	J	- 210 to 860	- 199.9 to 860.0		
	R	- 10 to 1710			
	T	- 210 to 410	- 199.9 to 410.0		
	N	- 210 to 1310	- 199.9 to 999.9		
	S	- 10 to 1710			
RTD	B	- 20 to 1802			
	Pt100	- 199 to 530	- 199.9 to 530.0		
	JPt100	- 199 to 520	- 199.9 to 520.0		
Current/voltage	0 to 5VDC	Approx. - 2% of setting of the lower limit of scaling (SLL) to approx. + 12% of setting of the upper limit of scaling (SLH), within the setting range	- 1999 to 9999		- 199.9 to 999.9 - 19.99 to 99.99 - 1.999 to 9.999
	0 to 1VDC				
	0 to 10mVDC				
	0 to 10VDC				
	1 to 5VDC	Approx. - 12% of setting of the lower limit of scaling (SLL) to approx. + 12% of setting of the upper limit of scaling (SLH), within the setting range			
	4 to 20mVDC				

Option specifications

Event output	Rated output	Contact	1a				
		Contact capacity	250VAC, 2.4A (resistance load)				
		Mechanical life	5 million times or more				
		Electrical life	0.2 million times or more				
Transmission output (PV transmission)	Voltage	Type	Load resistance	Output response time	Output precision	Output resolution	
		0 to 10mVDC	500kΩ or more	600ms or shorter	±0.3% (23 ±10)	Equivalent to the indication resolution or higher	
		0 to 1VDC					
		0 to 5VDC	1kΩ or more				
1 to 5VDC							
0 to 10VDC							
	Current	4 to 20mADC	600kΩ or more				
Communication	Communication standards	Conformity with RS-485 (1:31 stations)					
		Protocol	Proprietary to TOHO Electronics/MODBUS (RTU or ASCII)				
		Information direction	Half duplex				
		Sync system	Asynchronous				
		Transmission code	Two-wire type				
		Interface	1200/2400/4800/9600/19200 BPS				
		Character	Proprietary to TOHO Electronics	Start bit	1 bit fixed		
				Stop bit	1/2 bits		
				Data length	7/8 bits		
				Parity	None/odd No./even No.		
				BCC check	With/without		
				Address	1 to 99 stations		
			MODBUS (RTU)	Start bit	1 bit fixed		
				Stop bit	1/2 bits		
Data length	8 bits						
Parity	None/odd No./even No.						
Address	1 to 247 stations						
MODBUS (ASCII)	Start bit			1 bit fixed			
	Stop bit	1/2 bits					
	Data length	7 bits					
	Parity	None/even No.					
	Address	1 to 247 stations					
	Response delay time	0 to 250ms					
Power supply for driving sensor	Output voltage	12VDC					
	Allowable current	Max. 20mA (load resistance of 600Ω or more)					
	Output precision	± 1V (0 to 50°C)					

Description on operation keys

Operation key	Key name	Description
	MODE key	Used for screen change (Parameter settings are saved.)
	DIGIT MOVE key	Used for moving the digits at each setting (Selected digits blink and are effective for all modes.)
	UP key	Used for increasing the set value
	DOWN key	Used for decreasing the set values

Outline of operation flow

Setting mode select screen

* Some mode items are not displayed, depending on the product model.

Transition to the blind setting mode

- Description on the item marked "*"
- 1) In the blind mode, "on" or "oFF" is displayed below each character, where display is effective in "on" and display is ineffective in "oFF" (blind).
 - 2) Setting for the blind is available by pushing the "<<" key.
 - 3) Use the MODE key for selection when each parameter is to be individually blinded.
 - 4) For terminating the blind setting mode, turn off the power.

Operation flow of setting mode select screen

Operation mode

- *1: No display when the peak/bottom is not set in the PV hold function setting
 *2: Parameters that are set in the priority screen setting mode are displayed in the first through ninth priority screens.

Priority screen setting mode

Return to the item 1

Initial setting mode

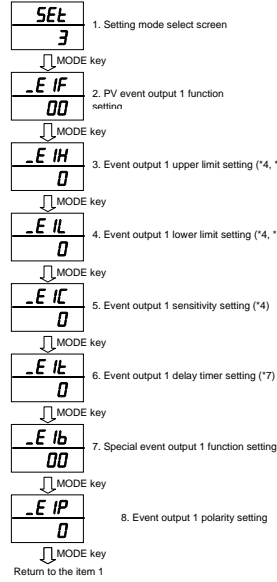

Return to the item 1

Display range setting mode

Return to the item 1

EV output 1 setting mode

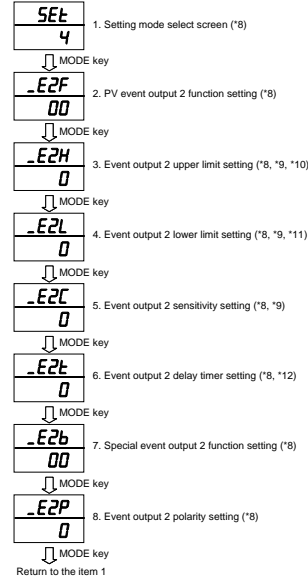

*4: No display when the measured value event output function is not used

- *5: No display when the measured value event output is not used for the upper limit alarm
 *6: No display when the measured value event output is not used for the lower limit alarm
 *7: No display when the function of measured value event output function/special event output is not used

Return to the item 1

EV output 2 setting mode

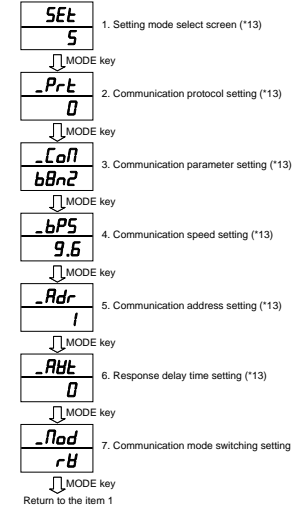

*8: No display when the event output 2 is not type-designated or when the event 2 is not assigned for output

- *9: No display when the event output 2 is not type-designated or when the event 2 is not assigned for output, or when the measured value event output function is not used
 *10: No display when the event output 2 is not type-designated or when the event 2 is not assigned for output, or when the measured value event output is not used for the upper limit alarm
 *11: No display when the event output 2 is not type-designated or when the event 2 is not assigned for output, or when the measured value event output is not used for the lower limit alarm
 *12: No display when the event output 2 is not type-designated or when the event 2 is not assigned for output, or when the measured value event output function/special event output is not used

Return to the item 1

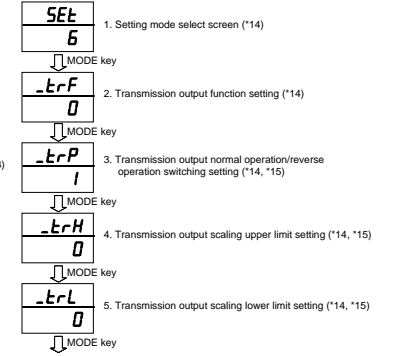

Communication setting mode

Return to the item 1

*13: No display when communication is not type-designated.

Transmission output setting mode

Return to the item 1

- *14: No display when the transmission output is not type-designated
 *15: No display when "None" is set for the transmission output function setting

Other displays

Parameter description

Operation mode

No.	Character	Name	Description	Initial value
1		PV display	Setting units: °C (models with inputs from thermocouple or resistance thermometer) digit (models with inputs in current/voltage) No display in the lower half of the screen	
2	bob	PV bottom hold value	Display of bottom value Bottom value to be reset by pushing and holding the "▲" key (UP key) * Regarding a hold value Make sure to reset the bottom hold value whenever setting is changed for inputs. (Input type, PV compensation, decimal point location, scaling upper/lower limit)	PV value when power is turned on
3	PERP	PV peak hold value	Display of peak value Peak value to be reset by pushing and holding the "▲" key (UP key) * Regarding a hold value Make sure to reset the peak hold value whenever setting is changed for inputs. (Input type, PV compensation, decimal point location, scaling upper/lower limit)	PV value when power is turned on
4 to 12		Priority screen 1 to 9	Display of a screen that is set in the priority screen setting
